

Achieve[®] programmable automatic biopsy system

Spring-loaded action for fast, accurate penetration

The Achieve[®] programmable automatic biopsy system is the one solution for your soft tissue biopsy needs. This lightweight, automated system offers spring-loaded action for fast, accurate penetration and gives you the precise control and quality sampling capability you need when working with calcified or fibrous lesions.

Precision

Two programmable firing modes

- **Automatic mode:** releases cannula and stylet in rapid sequence and captures tissue sample with the push of a button
- **Delay mode:** releases stylet and allows time for tissue to settle in notch; user verifies and documents stylet position, repositions if necessary and activates the cutting cannula

Echogenic markings on both stylet tip and cannula help confirm the placement of the sample notch for precise ultrasound positioning

20mm sample notch and thin-wall cannula for larger core

Convenience

35% lighter in weight than other automatic devices, making the system ideal for CT and ultrasound-guided procedures

One-handed design simplifies loading and operation while allowing for convenient manipulation of ultrasound transducer

Available with coaxial introducer for multiple sampling from one percutaneous puncture with minimal damage to surrounding tissue

The Achieve® needle's lightweight, one-handed design allows for convenient handling of ultrasound transducer.

Enhanced design

Less force is required to charge the Achieve® needle, ensuring smooth, one-handed operation

Reliable sample retrieval reduces risk of sample loss
